How can i download photos from icloud onto my pc

How do i download photos from icloud onto my pc.

Download all photos at once from iCloud to a Windows PC is a problem that many PC+iDevice users have nowadays. The new iCloud web interface does NOT allow the old key combination (Shift + Click) for selecting all images. Instead, you can select them one by one with pressing Command + Click simultaneously. However, the option to download all images at once is available in your system tray while the iCloud app manager is installed on your PC, and is running. Here you can learn to use it to download all your iCloud images at once. Use the iCloud application for Windows Download the iCloud application for Windows if you don't already have it. Navigate to the iCloud official web page for Windows and click Download. Once the download is finished, open the file and run the installation process. Now, sign in to the iCloud Manager app using your iCloud account. That's how it should look. While the program is running, take a look at the notification tray (low right corner of the screen where your watch, battery and other icons reside). You should see a small iCloud icon located there. When you found it, click on it and you will see 2 options: Download photo / Upload photos. Now, click Download Photos and should give you the option to select all of your iCloud photos (or yearly titled folders.) Note: If this window opens, just wait a few minutes and try again. Once the window appears to select images, check the ALL box and click Download. Depending on how many photos you have, you may need to wait a bit until you get them all on your PC. Just leave the laptop (or desktop) to complete the process. When it is done, check your iCloud /i Cloud Photos / Downloads folder. NOTE: This method can no longer work, if this is the case please use the following method below. Unfortunately, Apple has changed some elements of the iCloud application and the above method is not possible for the latest versions. Therefore, in this passage, we will apply the last method to download images and videos mass from the website. For this: Enter on iCloud online with your id apple. Login to iCloudNote: You'll need to sign up if you don't already have an account. Click the gallery icon and navigate to the topClick on the Icon GallerySelect an image, press the change and then select the last image. Note: There is a limit of 1000 at a time, make sure to select less than a thousandClick on the "Cloud with a download sign" in the upper right corner. Click the download sign after selecting the images Files will be downloaded to your computer in a zip file. Note: Make sure that iCloud sync is enabled on your iPhone. Final words This method has worked for me on the latest application of iCloud Manager for Windows (file version 7.3.0.20) Be aware that at some point in the future (when a new redesigned release of the app will be released) this method may not be useful. So make sure you let me know if this worked for you in the comments section below. I would like to update the article when Apple changes the rules. Do you want to download photos from iCloud on your iPhone, iPad or computer? iCloud Photos allows you to store and share images using Apple's online photo storage. But how do you get your photos from iCloud and your device? And how do you save photos that have been shared with you through iCloud Photo Sharing? In this tutorial, you will find out how to download photos from iCloud to your iPhone, iPad, Mac or PC. How to download photos from iCloudClick any title links below to go directly to that article section:1. HowPhotos from iCloud to iPhone2. How to transfer photos between iPhone and iPad using iCloud3. How to download photos from iCloud to Mac4. How to download photos from iCloud to Windows PC5. How to download photo from iCloud.com6 How to download photos from iCloud shared album1. How to download photos from iCloud for iPhoneCloud Photo Photo Automatically upload all your iPhone photos to iCloud. Once the images are in iCloud, it's easy to access it from other devices (such as iPad or computer). Cloud stores the full resolution versions of your photos. However, depending on the settings of iCloud, your iPhone may be storing smaller versions of your images (to free up space on your phone). You can check the iCloud Photo settings going to Settings> Photos. If you select Optimize iPhone Storage, your iPhone stores the smallest versions of your photos. But do not worry! You can download photos with full resolution from iCloud at any time. So, how do you download your photos with a complete resolution from iCloud to your iPhone? First, make sure the phone has Internet access. Wi-Fi is the best option. You can use mobile data, but keep in mind that if you download a lot of photos you could exceed the data plan. If you want to download a single image to edit, just open the photo in your favorite photo editing app. For example, open the photo app and tap Edit at the top right. The full resolution image will start downloading. Once downloaded, you can go ahead and change your photo. Would you prefer to store the full resolution versions of your photos on your iPhone (instead of smaller versions)? If so, go to Settings> Photos> Download and keep the originals. If you have a lot of photos in iCloud, it may take several hours to download them all on your iPhone. Once downloaded, the full resolution images will be stored in the app photo on your iPhone. Keep in mind that your iPhone must have enough free storage space to store these photos.2. How to transfer photos between iPhone and iPad using iCloudDo Do you have an iPad and an iPhone? If it's so, you can automatically download iPhone photos to iPad using iCloud. Having iPhone photos on your iPad allow you to view and edit your images on a larger screen. So how to transfer photos between iPhone and iPad? It's simple! Just make sure that iCloud Photo is enabled on both devices. On your iPhone, go to Settings> Photos> Photo of iCloud. Make sure iCloud Photo is turned on (green). Now, do the same thing on your iPad (Settings> Photos> Photo of iCloud). All photos on both devices will be uploaded to iCloud. Once loaded, the same pictures will appear in the app photo both on your iPhone and on the iPad. This is called a "synchronization". When your photos are synchronized between devices, any change you do on a device will be reflected on the other device. So if you change photos on your iPad, those modified images will automatically appear on your iPhone. And viceversa. Just keep in mind that if you delete a photo from a device, it is deleted from the other device too.3. How to download photos from iCloud to Mac You transfer your iPhone photos to your Mac computer? Maybe you want to create a backup of your photos on an external hard drive? With iCloud photo, it's easy! First, make sure that iCloud Photo is enabled both on your iPhone and your Mac. On your iPhone, go to Settings> Photos> Photo of iCloud. On the Mac, click the Apple icon at the top left of the screen. Go to system preferences> iCloud. Make sure the photo option is activated, then click Options. Next, make sure that iCloud photo is turned on. Click Done, then close the iCloud Options box. With iCloud photo enabled on both devices, the photo app on your iPhone and Mac will be synchronized. Every time you take a new photo with your iPhone, it appears automatically in the photo app on your Mac. From the photo app Mac, you can download full resolution images on your hard drive (or an external disk). Here's how to do this:Open the Photo app on your Mac. Then select the pictures you want to download. To select multiple images, use one of the following options: To select a group of photos, drag the pictures. To select multiple photos that are not in a group, hold the Command button while clicking each image. To select all photos, press Command + "You have selected photos, go to file> export> export photos. Check the export settings, then click Export. Select the location where you want to export photos, for example. Images, external hard drive, etc. Then click Export. The photos will be downloaded to the chosen location on the Mac or on the external hard drive.4. How to download photos from iCloud to PC Windows Do you have a Windows computer? Cloud for Windows allows you to automatically download photos from iPhone to Windows PC. First, make sure that iCloud's photos are enabled on your iPhone (settings> Photos> Photo of iCloud). Next, check if you have installed iCloud For Windows software on your computer. If you don't, click here to download it from the Apple website. Open iCloud for Windows on your computer and log in with your Apple ID. Make sure the photo option is activated, then click Options. Turn on the iCloud photo library and download new photos and videos to my PC. Click on, then apply. Now, every time you take pictures with your iPhone, you download automatically on your computer. To find your iCloud photo on your computer, go to File Explorer> Photo of iCloud. The photos of your iPhone will appear in the Downloads folder. If you wish, you can copy the images to a different folder on your computer. Or copy them to an external hard drive to create an extra backup of your photos.5. How to download photos from iCloud.com did you know that you can view and download iCloud photos using the iCloud website? This means that you can download photos to any computer "even if you don't belong to you. Just open a web browser on your computer and go to iCloud.com. Log in using your Apple ID and password. Click Photo to open the iCloud photo library. Find the photos you want to download and select using one of the following options: To select a photo group, click the first photo, then press and hold the Shift key and click on the last photo in the interval. To select multiple photos that are not in a group, hold down the Command button while clicking on each image. To select all the photos, press command + "a when you have selected the images you want, click the Download icon (Cloud with arrow down) at the top right. Your photos will be downloaded to your computer. You will find them in a folder called iCloud photo inside the Download folder. From there, you can move images to any position on your computer or external hard drive. When you have finished downloading photos, log in to iCloud by clicking on your name at the top right, then sign. If you don't sign, the person subsequent to using the computer may be able to access your iCloud account. Photos of the sharing cloud makes it easy to share photos with friends and family. But how do you download photos from an iCloud shared album on your device? When someone shares photos with you, you will receive an email or notification on the screen. Click Sign up to access shared images. Now you can download these shared photos on your iPhone, iPad or computer. 6.1 How to download photos from iCloud shared album to iPhone or iPadon iPhone or iPad, open the photo app and select Album at the bottom of the screen. In the shared album section, it tap the name of the album you want to open. If you can't see the album you want, tap See all when you opened the shared album, tap Select at the top right. Select the photos you want to download. To download all the photos in the album, tap Select everything. When you have selected the images, tap the Share icon at the bottom left of the screen.
