Cùng với đó chúng ta cũng không phải lo lắng đến cấu hình thiết bị không đảm bảo tiêu chuẩn như khi sử dụng chiếc điện thoại đời cũ. Về cơ bản cách chơi game trên Gameloop khá giống với các phần mềm giả lập như BlueStacks, LDPlayer, vv.Gameloop có những ưu điểm vượt trội sau:Tương thích và hoạt động tốt ngay cả với máy tính cấu hình thấpNói tới việc chơi game mobile trên máy tính, chắc chắn chúng ta sẽ nghĩ ngay tới những cái tên như BlueStacks, Nox hay LDPlayer... nhưng đa số những giả lập này đều có kích thước khá lớn, cài đặt phức tạp... đó là còn chưa kể tới việc ngốn tài nguyên, khi sử dụng song song với các chương trình máy tính khác sẽ khiến máy giật, lag, làm giảm hiệu suất công việc.Thiết lập cài đặt cho GameloopNhưng qua trải nghiệm cho thấy, kể cả khi bạn đang khởi chạy và chơi game trên Gameloop, vẫn có thể nghe nhạc trên Youtube hay làm việc với hàng chục tab trình duyệt mà không có vấn đề gì.Cài đặt GameLoop đơn giản và nhanh chóngTuy nhiên, mọi nhược điểm trên đều đã được GameLoop khắc phục một cách triệt để, cụ thể:Bộ cài cực nhẹThao tác cài đơn giản, chỉ với vài click chuộtQuá trình cài đặt nhanhKho game mobile cực đỉnhGiả lập này được thiết kế tối ưu hoá về mặt chất lượng và trải nghiệm của người chơi. Chúng ta không còn cần tải các file APK hay phải mất công tìm kiếm trong CH Play những game mình muốn, vì hàng loạt những game hành động, game bắn súng sinh tồn... hay nhất hiện nay đều đã có sẵn ngay tại giao diện chính (Game Center - Trung tâm trò chơi) của Gameloop.Giao diện chính của GameloopChỉ với một cú nhấp chuột là có thể chơi bất cứ lúc nào. Một số game bom tấn đang có sẵn trên Gameloop:Nếu bạn là người thích những game cổ điển kiểu Candy Crush Saga, Zombie Tsunami hay game bi-a, game nông trại... thì cũng đừng lo, vì tất cả đều có mặt tại Gameloop.Tối ưu hoá giao diện và đồ hoạHiếm có một giả lập máy tính nào cho phép người dùng có thể tinh chỉnh các thiết lập một cách đa dạng và chi tiết như Game Loop, chỉ cần vào Settings, chúng ta có thể tự mình thiết lập cấu hình cho chính nó (giao diện, RAM, chất lượng hình ảnh...)Tuy chỉnh chất lượng hiển thị khi chơi game trên GameloopHoặc nếu muốn chơi game mượt hơn, hình ảnh hiển thị rõ nét hơn, bạn cũng chỉ cần 1-2 click để chọn hiển thị với chất lượng HD hay hơn thế nữa.Tối ưu hoá trải nghiệm người chơiVới các game mobile khác (như PUBG Mobile, Free Fire...), sau khi cài đặt trên giả lập, chúng ta sẽ cần thiết lập bàn phím ảo, không những mất thời gian mà với những người không có nhiều kinh nghiệm, đây sẽ là một thách thức không nhỏ.Nhưng Gameloop vượt trội hơn khi đã cài đặt sẵn những nút chơi này và hiển thị cho chúng ta ở danh sách bên phải màn hình. Bạn có thể sử dụng ngay những thiết lập này hoặc tự mình điều chỉnh lại nếu muốn.Phím ảo chơi game trên GameloopCó thể nói không quá rằng Gameloop chính là giả lập được ra đời để phục vụ cho các game sinh tồn như PUBG Mobile. Bạn sẽ có một trải nghiệm không thể vượt với hơn với tựa game hay nhất thế giới hiện đại này. أحسن نسخة موفرة من الباتل روفر وكنكسكركم على الاندرويد 4 أحسن نسخة موفرة من الباتل روفر وكنكسكركم على الاندرويد 4.
