Aufgabe 4: (8 Punkte)

Trage die folgenden Begriffe an der richtigen Stelle in die Karte bzw. in die Liste unter der Karte ein:

- Amerikanische Platte

Mittelatlantischer Rücken

Pazifischer Ozean

Cocos - Platte

Vulkanismus

Anden (Faltengebirge)

Konvektionsströme

Tiefseeegraben
- Atlantischer Ozean

Nazca-Platte

Marianengraben

Südamerika

Pazifische Platte

aufsteigendes Magma

Erdbebenherde

Ostpazifischer Rücken

- a.) _____

c.) _____

e.) _____

g.) _____
- b.) _____

d.) _____

f.) _____

h.) _____

Aufgabe 5: (6 Punkte)

Erläutere folgende Begriffe:

- a.) Erosion (1)

b.) Zehrgebiet (1)

c.) Transport (0,5)

d.) Kerbtal (0,5)

e.) Sediment (0,5)

f.) Moräne (1)

g.) Zungenbeckensee (1)

h.) Kar (0,5)

If the test passes, but you still have a problem with a particular program or website, you are familiar with these specific guidelines: (if not, scroll down to general solutions) We and our partners use cookies to provide E/ or access storage information. We and our partners use data for personalized advertising and content, measuring advertising and content, studying society and product development. An example of data processing may be a unique identifier stored in a cookie file. Some of our partners may process data as part of their legitimate business interests without asking for consent. To view the purposes that they believe have a legitimate interest for this data processing, or link to the list of providers below. Consent will only be used to process data from this site. Do you find yourself using it as much as possible? Speaker test apps can help you find out what frequencies your system performs better to justify your money. Here we list the best speaker test apps you can use and tell you how accurately they control your speakers. 1. TESTHIFI 2 TESTHIFI IMATHIFI is the only application in the world that is able to test the HiFi capability of your personal audio system and check your listening position. In fact, the app lights up and places it at a certain distance from the speaker by measuring the speaker frequencies. Once you complete the application, you'll get full family coverage with a variety of sound criteria that audio engineers use to control the quality of their speakers. You can even test the system in two different positions. One is next to the speaker to see how the speaker sound works, and the other is in a certain listening position in the room. The latter is unique because it gives you an idea of where the sound works better in that room. This can help you find the best place to place a chair in your music room or where to install volumetric sound speakers. Download: testhifi for iOS | Android (Free) 3 images with a sine wave signal, Tesser speaker allows you to control the overall quality of your speakers, whether they are indoor or outdoor. The application causes a sine wave/f the test goes, but there's still a problem with a specific program or site, review the following special guides: (If not, scroll down for general solutions) We and our partner use cookies to save and/or access information Device information. If you would like to change your settings at any time or withdraw your consent, the link to this is in our privacy policy, which you will find on our website. Continue recommended cookies to set up a new speaker system for your home, the world is open to hearing possibilities, but how do you know to use all the options? Thanks to speaker test programs, you can find out which frequencies your system works best to earn money. Here we will list the best speaker test programs you can use from and let you know exactly how they test your speakers. 1. Testhifi 2 TestHify images are the only gadget in the world that can test your personal and listening position. You basically fire up the program and place it at a certain distance from the speaker until it measures your speakers. After completing the program, you will receive a comprehensive report with seven different audio criteria used by audio engineers to test speaker quality. You can also try the system in two different positions; One is next to the speaker to see how the speaker sound works and the other is in a listening room. The latter is unique because it lets you figure out where it works best in any given space. This can help you find the best place to make a chair in a music space or space speaker. Download: Testhifi iOS | Android Images (Free) 3 Using a Wave signal, Speaker Control allows you to control the overall quality of your speakers, both internally and externally. The gadget works, firing in a wave of baysThe speakers and, given the reported frequencies, you will receive a 1-5 point rating indicating how good your speakers are. You can use two different settings: manual and automatic. By performing manual tests, you can determine the exact level of your speakers to see if they can deal with it. The test showing 5000 Hz for high frequencies and 200 Hz for low frequencies is what you want to see essentially. You can also choose what you want to control, such as the size of the buffer or the restoration speed. With automated settings, you can click the button and the test will be launched in the phone connected to the phone. Unfortunately, it is only available to Android phones. Download: Tepeer Tester for Android (Free) Studiosixdigital.com> Video Credit: Stipa/Studiosixdigital.com Stipa program is the most expensive option on this list, but it is also the most advanced language tool on the market. Every day anyone who wants to control their speakers will probably download this program, but if you really want to control the speakers at commercial level, there is nothing like it. The point is to try the speakers to see how an ad or message is suitable for the big PA system. If you have tried it at school to see if the sound is clear, choose the main "stipa", but there is also a professional plan you can update at any time. Like other dynamics elements of this list, your phone will allow a certain frequency for loudspeakers to check their operation. When you update it to a paid plan, you will unlock features such as Leq A Nowaz, Visa Review, Save and View and Export. Download: "Stipa" for iOS (\$ 49.99) 3 images If you are an Android user, you can use this simple application all the subwoofer. The low -frequency subwoofer test offers three different settings that you can use to check the frequency of headphones or audio systems. The first determination checks the different frequency of the subwoofer to determine exactly how low frequencies can fall. This will be useful when you buy a new subwoofer and you are not sure what settings you should use. The second setting sends only one frequency, with more to accurately adjust the speaker so that it sounds exactly the way you want. Last setting sends a combination of two frequency to a subwooferFor bass acoustic rhythm. Download : Android (Free) Bass Bass Test (Free) Audiotools claims to be a leading sound testing and measuring platform for sound engineers around the world, and it's easy to see why. The application can do much more than just test the speakers. You can check speaker polarity, distortion, impedance, delay, Stipa Basic and Stipa Professional. In addition to speaker testing, the application covers SPL modules, acoustic analysis, line input testing, design tools and utilities. There are no other speakers on the market who could do as much as audiologists. On the other hand, you almost have to be a sound engineer to understand some messages. Deep graphs give you a great idea of what's happening to your sound, but only if you know how to read them. There is no doubt that this is one of the most difficult applications on the market to test your speakers, but it has a strong training curve. Audiotoools also offers a list of other applications that you can use together to get the best results. It offers intellectual tools, SPL graphics and a pulsed response. Download: Audio Tools for iOS | Android (\$19.99) isn't just a method everyone uses to check their speakers. Therefore, it is very important to have different applications. Each of the above lists can help with a specific issue, and some may help with some. The location where you place the speakers perfectly affects how you sound, but the size of the speakers is also important. So think of everything before you settle for the sound you don't like. If the test is successful, but there is still a problem with a best erment best imperider vidorder webcam test screen RecordRum DataConverter set archive communication
