The team team undertakes to provide a quality product. However, it is your decision to install our software on your device. The team's victory assumes no responsibility for any damage that can occur from the installation or use of TWRP. Support status: current maintainer: none code name: j2y18l1te app installation app (Request root): Download the official TWRP app (Required root): Play Store (recommended) No Play Store? Å, download the most recent version here. Install the app and open it. Accept the terms. Select TWRP Flash. Select your device from the device list (J2Y18L1te) and choose a version. The file will be downloaded to the Downloads folder. Browse and select the file. Tap the flash for recovery. Find out more about the app here. TWRP's current and past versions can be found in one of the mirrors below: Primary (Americas) Primary (Europe) TWRP Install (Requires TWRP 2.8.4 or higher already installed): Download the last TWRP (.img) image file from Download Link and Start TWRP. Go to install and find and select the Image button Browse the image you downloaded and select it. Choose the recovery and scroll to flash. Odin installation method (no Required root): You need to download and install Odin on your PC. Once Odin is installed, download the correct .tar file for your device from the download link above. Turn off your device. Turn on the device using the combination of correct keys to enter download mode and connect the device to your computer via a USB cable. Use the PDA card or button to browse and select the TAR file you downloaded and flashes the device. Note Many devices will automatically replace your personalized restore during the first start. To avoid what, use Google to find the appropriate key combo to enter the recovery. After typing the FastBoot restart, press and hold the Combo key and start on TWRP. Once TWRP started, TWRP has patching the warehouse ROM to prevent the ROM to replace TWRP. If you don't follow this step, you will need to repeat the installation. Hi, you can download APK file "cyanogenmod roms" for Samsung Galaxy J2 Pro for free, APK file version is 4.0 to download to your Samsung Galaxy J2 Pro just click on this button. It is easy and guarantee. We provide only original APK files. If any of the materials on this site violates your rights, report the description of cyanogenmod romscyanogenmod rom is an application to get the official official Roma from the same organization. It is a very useful software for all the owners of Android devices. The application includes the vast majority of valuable tools, for example, later: G-Apps, CF-Root, C-Apps, Recovery (CWM recovery and TWRP recovery) and unofficial versions of unofficial ports. Thanks Å € xDÅ: devdb information rustrom, rom for the samsung galaxy j2 taxpayers rustdroid psychicgirl source code: / J250GDUXU3ASK1 / 305496 / ROM OS Version: 7.x ROM KERNEL: Linux 3.x calculated based on: Australian stock J250GDUXU3ASK1 Information about the state version: Stable Stable Current Version: V1 Stable Release Date: 2020/03/11 Created 2020- 03- 13 Last update 2020/03/13 The dialer is broken in the Google version it is possible to carry out who Love, but there is no user interface called so you can't hang up and I can't even answer calls because of the same problem, the Google Dialer framework installation does not help. Everything is running very well on the Samsung Tho version different from that correction contexts. The dialer is broken in the Google version you can make calls, but there is no user interface called so you can't hang up and you can't even answer phone calls because of the same problem, installing Google Framework Dialer does not help. Everything is running very well on the Samsung Tho version different from that correction contexts. You need to read the information Google version in my post you just mentioned. Important - You must set - Applications - Default Apps - Calling App and choose Google phone. I tried many times and works well if you do this step. O: I'm sorry not to see what time on the samsung version now I don't think about a Google test version, but I'm sure you're right that she was dump on my part. But the hay you didn't mention any thing about contexts solving any problem is always good to read the first post a few when you have problems with the Roma to see if there is some info. Your only person who had the problem of context. If I see someone else's the same problem I add that at the first message. Thank you for allowing me to know how to solve the problem if it is a problem for anyone else. No problem is always good to read first post a few when you have problems with the Roma to see if there is any info. Your only person who had the problem of context. If I see someone else's the same problem I add that at the first message. Thank you for allowing me to know how to solve the problem if it is a problem for anyone else. YEP can confirm dialer works after selecting it as a default application I used Samsung ROM, no one able to install Microg? I can apply a patch and have the enabled spoofing signature, but when I install the Microg stuff I locked up in Samsung boot logo, I let run for 30 minutes before removing the battery. I tried the Nanroid method and install the Microg repository on F-DROIDE. Know a little. Edit: He renounced this ROM after trying to use Magisk install Microg. If someone else is trying to get Microg to take Read Keep -> Download given by the official firmware from Sammobile, used Super R Kitchen (Linux) for Deodex ROM and to add Magisk, Services.jar then patched with Nanroid-Patcher-22.6. 20200208.zip in TWRP recovery. J250F started and installed Amaze.APK from the EXTERNAL SD card enabled Root ROBA Google then deleted in / system / priv-app / in preparation for microg. (See Microg prerequisites) again restarted in recovery and microg installed with nanroid-microg-22.6.20200208.zip. Phone Started and Auto Test Microg is ready to leave! Just need some samsung Debloat garbage and I'm happy camper. Last modification: Link Apr 20, 2020 added for SM-J250F I need someone with that test device. It should solve network problems. Hi dear Rustdoriid Devs. I tried ROM you did for SM-J250F and as my stock rom from Turkey I have cellular network problems. The problem is also Thought I put my SIM card I read around 0-5 sec. Then he starts not to read it. My other problem is to keep saying com.android.phone was arrested and the latest problem is only in samsung rom I have two other problems in both, but samsung rom have a problem with the samsung browser it is very open as many times I try hello dear rustdoriid devs. I tried ROM you did for SM-J250F and as my stock rom from Turkey I have cellular network problems. The problem is also Thought I put my SIM card I read around 0-5 sec. Then he starts not to read it. My other problem is to keep saying com.android.phone was arrested and the latest problem is only in samsung rom I have two other problems in both, but samsung rom have a problem with the samsung browser it is very open as many times I try to solve network problems and com.android.phone crash you need to install the stock ROM for your country and root use Copy the CSC folder to the root directory, then use this folder to replace CSC folder in the RUSTROM zip . I can't understand CSC for each country. Then update Samsung Browser and should work. I do not use Telephone plus so will not update it. Hey, I tried UR ROM and it's enough oke, but there are still some bugs that I found in my experience. 1, sometimes 4G is not shown in the status bar (it must restart the phone to resolve this problem). 2, the Samsung store cannot be installed. It is Fix Entertainment: Installation error code 0 (I fixed this error in my phone, if you want to know how to solve the problem, contact me: [email, protected]). 3, ICONPack that I downloaded Samsungs Samsung Shown, but it's gone when I left the app. If we apply the icon that I downloaded, the bug has yet happened (I don't know how to solve it, help me). 4, can you teach me how to make a personalized rom like you please? Because I want a more lighter than your Roma, and recovers some features you have removed. Hey, I tried your Roma and it's rather or, but there are still some bugs that I found in my experience. 1, sometimes the 4G is not displayed in the status bar (it must restart the phone to solve this). 2, the Samsung Store cannot install app. It Fix Show: Installing the error code 0 (I solved this error in my phone, if you want to know how to solve, contact me: [Secure Email]). 3, the icon I downloaded in the Samsung theme is shown, but it's gone when I left the app. If we apply the icon that I downloaded, the bug has yet happened (I don't know how to solve it, help me). 4, can you teach me how to make a personalized rom like you please? Because I want a more lighter than your Roma, and recovers some features you have removed. If you have network problems you may need to replace the CSC folder as I said above. It is necessary to delete and format data for the ROM to work better. Icons I can't repair you install other icons packages and a different pitcher if you want custom icons. Just use a classy kitchen on windows and superr kitchen on Linux to make custom rom. You can find help in the XDA XDA posts. I used the samsung rom, anyone who can install microg? I am able to patch and have a signature enabled spoofing, but when I install the Microg stuff I'm locked in the Samsung Boot logo, I let it work for 30 minutes before removing the battery. I tried the Nanroid method and installing the Microg repository on F-Droid. It was a bit 'of time. Edit: Given this ROM after attempting to use Magisk to install Microg. If someone else is trying to get Microg to take reading -> last downloaded from the official firmware from Sammobile, Super R Used Kitchen (Linux) to Deodex ROM and add Magisk, then Patched.jar services using Nanroid-Patcher-22.6. 20200208.ZIP in TWRP Recovery. J250F started and installed Amaze.APK from the External SD card enabled root then deleted Google Stuff In / System / Priv-App / in preparation for Microg. (See Microg Prerequisites) Restart in recovery and installed Microg with nanroidoid-microg-22.6.20200208.zip. The phone started and the self test microg is good to go! Just need to deviate a little samsung garbage and I'm happy camper. TQ bro his disturbance working thanks for your lightstock rom sir ... but where are you going? We miss you a lot. Delice of Plase in community with more than your Roma. Any possibilities to operate Samsung themes correctly? When I installed a theme, it changed only wallpapers and icons. It should also change the notification bar, contacts and the theme of the phone. Is there a way to make it work properly? BTW I used this ROM for a month now and I can say that this is the best decision I've ever done! Thanks! Thank you friend worked perfectly in SM-J250F / DS. And don't ask why I'm using such an old phone in 2021 2021
