Last updated on December 10, 2020 OneBlock is my new survival map where you stand on a solitary block floating in the void. You can mine the same block over and over again, and it gives you basic materials that slowly get better and better. You go through some stages, and the infinite block slowly upgrades to better blocks, chests and new mobs! Excluding Tutorials and Afterphases, there are 10 total stages, which are: The Plains, The Underground, Icy Tundra, Ocean, Jungle Dungeon, Red Desert, The Nether, Idyll, Desolate Land, The End. Each stage presents a set of blocks, objects, and monsters appropriate for setting. They can also appear random from the previous stages. There he deposited about ~6500 blocks before the Afterphases. Most stages have about 600-700 blocks, although the previous ones are shorter. After completing the tenth phase, an end will produce eggs under the infinite block. After that, the infinite block enters the Afterphases. Then, an infinite number of blocks may appear, which are randomly chosen from all the previous stages. The special coffers still lay eggs, as well as the random mobs of all stages.Each block has a weight, which determines the probability of appearing for a random block. This weight is approximately the default amount of this block at all stages.At each stage, a specific group of mobs can lay eggs. These include most hostile, passive and neutral mobs. However, the infinite block will not generate monster bosses and mob utility, such as the dragon ender or the iron golem. All mobs that can be played will play at least once. There are also random eggs so that you can get previous mobs again. In addition to this, can appear any mob, which of course can lay eggs in the biome of the Plains, the Nether or the End.There are regular coffers, which contain random items from the current phase. After each stage, you get a benevolent gift, which is a box that includes a selection of high quality items. In the later stages, special pectoral can also lay eggs. These include rare, musical, and odd coffers. There are also various boxes, which can contain items from the current and previous stage.Yes, there are various boxes, which can contain items from the current and previous stage. Random blocks will also produce eggs, which may come from the current or previous stage. Any mob generated in later stages can also randomly reproduce in later stages. Natural mob egg laying is also enabled.Yes, natural mob egg laying is enabled in OneBlock. However, only mobs that can lay eggs in the plains biome can lay eggs naturally in Overworld.Each stage has a different theme, which may involve one or more biomes. However, the Overworld is only found in the plains biome. This means that wherever you go in the world (except for other dimensions), you have the environment of a plains biome, regardless of what the infinite block produces.Yes, structure generation is enabled by default. This means that lower fortresses, finite cities and similar structures can lay eggs in alternative sizes!Yes, it is. The Nether blocks and the oxidian can be obtained in step 7 and subsequent steps. Lava buckets are also available in the bonnets. The end can be reached after completing all the stages.It's what you want it to be! You can do pretty much everything you can do in a normal world of Minecraft, given enough time. A good goal could be to defeat the dragon ender! But he could also build the biggest heavenly castle ever! It all depends on you!Yes, the map smoothly on the servers.
